V.O. Sukhomlynskyi State Scientific and Pedagogical Library of Ukraine

UKRAINE

Established in 2003, the Network of Educational Libraries with the Ministry of Education and Science of Ukraine and the National Academy of Pedagogical Sciences of Ukraine is the largest one in the library system of Ukraine, which unites more than 16 thousand book collections of various types. The network is headed by the V.O. Sukhomlynskyi State Scientific and Pedagogical Library of Ukraine NAPS of Ukraine (hereinafter - SSPL).

One of the priority activities of educational libraries is the modernization, optimization, deepening and expansion of the information support system in the education and science field. SSPL as the main coordinating scientific and methodological center of the educational libraries network with the Ministry of Education and Science of Ukraine and the National Academy of Pedagogical Sciences of Ukraine pays special attention to the development of information and publishing activities of leading educational libraries and improving the librarians professional development system. Beginning in 2005, the SSPL began annual preparation of publications, dedicated to show the work of leading educational libraries in research and information and publishing spheres and the activities aimed to improve the librarians professional skill (2005-2013 - "Consolidated plan of information and publishing activity and main activities on advanced the training for librarians in education field", 2014-2019 - " Handbook of scientific information and publishing activity and the main activities aimed to improve the librarians professional skill in the education field", 2020 -" Scientific-informational and socio-cultural activities of leading educational libraries - 2020", 2021 - " Scientific-informational and socio-cultural activities of leading educational libraries - 2021 "(hereinafter - the Handbook)).

During the whole period, the SSPL specialists prepared 16 publications, which contributed to the improvement of the information support system in the educational sector of Ukraine, as well as to the realization of the main task - to provide equal and free access of Ukrainian educators to knowledge. Regular participants of the Handbook are SSPL, Lviv Regional Scientific and Pedagogical Library, Mykolayiv Scientific and Pedagogical Library, special libraries of scientific institutions with NAPS of Ukraine, libraries of regional institutes for postgraduate pedagogical education and libraries of higher educational institutions of pedagogical and engineering-pedagogical profiles (2021 - 59 leading educational libraries).

Information to the Handbook is submitted in the prescribed form and, after scientific analysis and systematization, is included in four sections: "Scientific and scientific-methodical materials prepared by leading educational libraries of Ukraine" (information on the preparation of works of scientific-practical conferences and seminars, research, instructional and methodical editions, periodicals), "Secondary

documentary and information resources of the leading educational libraries of Ukraine" (thematic bibliographic indexes, biobibliographic indexes, bulletins, exhibition catalogs, bibliographic lists, bibliographic reviews, abstract information/references, analytical materials, information and analytical reviews), "Electronic resources" (electronic databases of self-generated libraries and other electronic databases (prepaid and free) with active references, information and bibliographic resources, Internet resources, thematic folders and a list of virtual exhibitions planned for the current year), "Socio-cultural activities" (information on scientific and practical conferences, scientific and methodical seminars, training seminars, educational and problem-oriented seminars, workshops conferences, internships, round tables, meetings of clubs and methodological associations, Internet seminars, webinars, workshops/master classes, trainings, schools for young librarians and leaders, etc.).

For ease of use and comprehensive disclosure of the contents of the sections (table contents) an auxiliary device was created - thematic and nominal indexes and a list of participating libraries with active references to their websites was given

The topics of scientific information and publishing products and yearly planned events reflect current issues in the field of education and science and librarianship. It should be noted that, up to the present, the specialists of book collections in the preparation of methodical products prefer to create methodical recommendations, practical, methodical and information-methodical manuals. The collections of scientific works and materials of conferences and seminars are also being prepared. Currently, eleven periodicals are published: scientific electronic periodical "Analytical Bulletin in the field of education and science", scientific publication "Scientific and pedagogical studies", scientific and methodical journal "School Library Plus" (SSPL), scientific and methodical almanac "Cornfield of Knowledge" and the regional pedagogical newspaper "Dzherelo" (ONBIT KZVO "Dnieper Academy of Continuing Education "DOR"), scientific and methodical journals "New Pedagogical Thought" (library of the Rivne Regional Institute of Postgraduate Pedagogical Education), "Source of pedagogical innovations" ("KVNZ" Kharkiv Academy Continuing Education") and "Pedagogical Bulletin of Podillya" (Khmelnyskyi OIPPO Library), "BiblioAs" periodical (library of Mykhailo Kotsyubynsky Vinnytsia State Pedagogical University), newspapers: "Library News" (scientific library of Uman State Pedagogical University) and "The Future" (Khmelnysky OIPPO library).

However, most of the publishing products prepared by specialists of leading book collections are secondary information resources. On average, they are 75% of the total number of planned publications. Librarians prepare research and support, bibliographic and recommended bibliographic indicators, bulletins, exhibition catalogs, abstract/references information, analytical materials and information-analytical reviews, which are formed mainly on the funds of individual libraries, revealing their potential. Preference is given to bibliographic lists and reviews, on average almost 63% of all secondary products.

Today, all leading educational libraries have their own websites or web pages, where they place works in electronic full-text format. Most libraries have electronic databases of their own generation, electronic catalogs as well as catalogs of new arrivals. In addition, The number of virtual exhibitions, presentations, webinars, online seminars, web conferences and online training courses is increased yearly.

The annual preparation of the SSPL Handbook contributes to the library and information support of specialists in the field of education, gives for the general public of the library community the opportunity to get acquainted with the achievements of

educational book collections and use them in their work and plan in advance participation in socio-cultural events.

For the general public, the Handbook is posted on the web portal of the V.O. Sukhomlinsky State Pedagogical University of Ukraine in the section "To Library Specialist" (<http://dnpb.gov.ua/ua/довідник-діяльності-освітнянських-бі/>) || (<http://dnpb.gov.ua/ua/handbook-activities-of-educational-bi/>) and also in the electronic library of the National Academy of Pedagogical Sciences of Ukraine (<http://lib.iitta.gov.ua/>).
